

David Garcia

SOFTWARE ENGINEER

Beaumont, Texas • joegar000@gmail.com • <https://joegar000.github.io> • <https://github.com/joegar000>

SUMMARY

Experience working on projects both alone and with a team from conception to deployment. Proven ability to lead projects and improve user experience leveraging AI technologies to increase productivity. Passionate about programming as a job and as a hobby.

WORK EXPERIENCE

Software Engineer

Mometrix Test Preparation

June 2022 - Present

- Technical lead for the development of a rich text editor built using the ProseMirror toolkit and its implementation into the company's internal PHP-based task platform resulting in improved user experience and the ability to write task updates in greater detail, facilitating the creation of over 100,000 comments and updates in one year of use.
- Experience working with Kubernetes to create and edit workflows for migrating HTML from the company's old CMS to the new one.
- Lead developer on a front-end hierarchy editor to load, create, and modify hundreds of database hierarchies at a time using React and TypeScript to be used for editing content on the company's online learning platform which accounts for 20% annual revenue.
- Created a CSS parser in NodeJS to selectively remove, add, or edit styles on HTML content.

Software Engineering Intern

Mometrix Test Preparation

October 2021 - May 2022

- Lead developer of a rich text editor built using the ProseMirror toolkit.
- Created a flask application for managing iDevAffiliate group access.

Software Engineering Intern

Application Factory, Inc

April 2021 - October 2021

- Utilized the Angular framework with HTML, SASS, and TypeScript to update the company's website.
- Diagnosed and resolved critical bugs in the flagship application using .NET framework, WPF, and C#, enhancing system stability.
- Refactored code to adhere to the MVVM design pattern, enhancing logic separation and maintainability.

PROJECTS

Watch Algorithms | <https://joegar000.github.io/watch-algorithms>

- Single page application constructed using CSS transitions, TypeScript, React, and the React Router library to animate sorting algorithms.

AI Language Partner | <https://github.com/joegar000/ai-language-partner>

- Next.js application for voice chatting with a ChatGPT model using OpenAI's API, primarily to practice a new language.

Micropad | <https://github.com/joegar000/micropad>

- NodeJS web application for controlling computers over LAN using mDNS lookups, Websockets, and React.
